

Get the Power to Take Bar Code Printing Where It's Never Been Before

Zebra and PowerCart have teamed to take to take your productivity where it has never gone before. Cart-mounted printers have the power and versatility to perform wherever work needs to be done in your plant, warehouse, or distribution center.

Cart-mounted Printing Solutions from Zebra®

Get Everything You Want in a Printer, for Everywhere You Need to Print

Go beyond traditional mobile printing. When you combine Zebra® industrial-strength bar code or RFID smart label printers, integrated computing technology, and a rugged cart with onboard power supply from PowerCart, users can work a long shift without changing media or recharging batteries. Now, you have the power to print wherever you need labels, not just wherever there is an outlet.

Save Time—Save time and labor by eliminating trips to a central printing location to pick up labels. Roll the cart right to the receiving dock or even into a truck to label inbound materials for cross docking or direct replenishment to the shop floor.

Prevent Errors—Printing labels at the right place at the right time helps make sure they're placed on the right item. You'll prevent errors that lead to inventory inaccuracies and mis-shipments by printing labels on location, on demand.

Be Flexible—Flexible manufacturing requires flexible systems. Why wire workstations when you can wheel label printing into place to accommodate flexible work cells? When the shop floor gets reconfigured, you avoid the time and expense of rewiring.

Computerize Confidence—An optional wireless terminal converts the printing cart into a complete mobile workstation with the capability to simultaneously support up to five additional peripherals.

Productivity Goes Up When Printers Don't Go Down—Durable printers mounted on rugged carts reduce the need for operator handling and the potential for damage. On-board power designed for an eight-hour shift and large media rolls let users print thousands of labels without interruption.

Increase Volume, Not Expenses—Share cart-mounted printers to make the most efficient use of resources. Use them to help manage temporary spikes in activity without making long-term commitments of space or capital for new equipment. When the job is done, redeployment is a snap.

Talk to Zebra today to find out where the full power of enterprise mobility can take you.

Let the Workhorses Out of the Stable

The industrial cart-based printing solution from Zebra and PowerCart supports Zebra's high-throughput, high-reliability **Z4Mplus™** and **R4Mplus™** printers, so you can use a real workhorse wherever labeling needs to be done. The printers are made from die-cast metal and have optional 802.11b wireless connectivity, so they can print and communicate in virtually any industrial environment.

Zebra's Z4Mplus prints in direct thermal or thermal transfer mode and accepts a wide variety of label, tag, and ticket materials for compliance labeling, work-in-process tracking, shipping and receiving, inventory management, and more.

Zebra's R4Mplus can encode and verify an embedded RFID transponder and print a shipping label in a single pass. The printer/encoder supports multiple RFID protocols, including the leading specifications required for compliance tagging.

The add-on **Zebra PS 2100™ series** modular printing system includes a programmable terminal and offers a choice of bar code and smart label printers for producing additional label formats and sizes. Input and interface options support bar code scanning and connectivity to other peripherals.
